

Alisha Li

al138@wellesley.edu | alishali.info | [github](#) | [linkedin](#) | Boston, MA

EDUCATION

Wellesley College

Wellesley, MA

B.A. in Data Science, GPA: 3.92/4.0

Expected May 2027

- Relevant Courses: Probability, Probabilistic ML, Causal Inference, Computer Systems, Graph Theory, Linear Algebra, Regression Analysis, Stat Modeling and Inference, Multivariate Stats, Physics E&M
- Awards: Sophomore Data Science Prize, Data Science Capstone Prize
- **Massachusetts Institute of Technology Cross-Registration: 6.7900 Machine Learning (Grad Level)**

EXPERIENCE

Amazon Web Services

Seattle, Washington

Software Development Engineer Intern

May 2026 – Present

- Built Python library that generates synthetic data from host/software/advisory distributions to accelerate security testing/deployment; **connected to team's integration tests, which runs against all prod-deployed code.**
- Applied property-based testing principles to generate data whose construction embed expected test assertions

Amazon Web Services

Austin, Texas

Software Development Engineer Intern

May – Aug 2025

- Created a portal to ingest AWS security's global vulnerability datasets **reducing 2+ day manual engineer input-approval process to minutes**, using React, API Gateway, Lambda, and DynamoDB in Java
- Secured portal to team-only with UI authN/authZ and SIGV4 signed requests to IAM-configured API Gateway

Harvard-MIT Health Sciences & Technology

Cambridge, MA

Data Science Researcher

Mar – Aug 2024

- Engineered pipeline transforming data from research DBs into informative visuals for MD-PhD program evals
- Conducted name disambiguation experiments with confusion matrices, **increasing accuracy by >5%**
- Redesigned relational database schema for more natural SQL queries that accommodate a wide array of visuals

LEO Fencing Club Automations

Cambridge, MA

Freelance Developer

Sep – Dec 2025

- Built club's current scheduling and billing system, which **processes ~\$10k transactions biweekly**
- Reverse-engineered Wix APIs for auto-charging, with added retry and rollback logic to ensure reliability

PROJECTS

Dub-lite – ML Pipeline for Video Dubbing | [GitHub](#)

Aug 2025 – Present

- Built a dubbing pipeline that preserves background audio, speaker identities, and engineers audio alignment; used Redis to track jobs, served via FastAPI, DigitalOcean, and Modal (GPUs)
- Added pluggable STT, translation, TTS, and diarization models, enabling cost-latency-accuracy tradeoffs
- Reviewed ML papers to determine best models and prompts for each task (denoising, sentence splits, etc.)

American Time Use Survey Analysis – DS Capstone | [GitHub](#)

March – May 2026

- Modeled daily time-use across undergrads, graduate students, and employed new-grads using two-part hurdle models (logit and log-OLS) per activity bucket, w/ multinomial LRT confirming activity difference between groups
- Found new-grads were less likely to work on a given day but worked longer when they did. And graduate students and new-grads engaged in more domestic care but less community care than undergrads

Predictive Modeling of Fencing Performance | [Paper](#)

Apr – May 2025

- Collected and cleaned 3 years of competitive fencing data for supervised learning over a net-points objective
- Applied cross-validation to select between linear regression and random forest models
- **Showed some “costly” actions actually had significant positive impact, contrary to coach hypothesis**

Charter and Public School Comparison | [Paper](#)

Nov – Dec 2025

- Analyzed 1178 NY schools to find that charter status alone did not increase graduation rates, but significantly changed how other factors like suspensions, second-language share, and foster-care status related to it

TECHNICAL SKILLS

Languages: Python (JAX, NumPy, NumPyro, Pandas, Matplotlib), R, SQL, Java, C, JS, TS, MonkeyC

Tools & Frameworks: Git/GitHub, Hugging Face, AWS Suite, Jupyter/Colab, React, FastAPI, Modal, Wix
